

TO LOG IN WITH SSH YOU CAN USE THE PRIVATE KEYS YOU CAN FIND THEM ON A CONNECTED USER

ONCE ENTERED A TERMINAL USE THE CAT COMMAND TO FIND AND GREP THINGS LIKE IF YOUR LOOKING FOR A PASSWORD TYPE

*****USE `ls -la` command to show history vey important pls*****

`cat etc/passwd`

use the `chmod + x filename` to make it executable

use the `scp` command to transfer files to another the ssh server

with

`scp /opt/linPeas/linpeas.s jan@ip address:/dev/shm`

THEN USE THE use the `chmod + x filename` to make it executable

WHEN RUNNING A FILE, SH OR SOFTWARE ON SSH

RUN IT WITH just `./`

eg `./linpeas.sh`

TO OUTPUT IT TO A FILE DO THE

`./linpeas.sh | tee exploit.log`
